InfoAlert!

Quick Communication Between Citizens and Law Enforcement Increases Public Safety

CSI's InfoAlert! is a modern, downloadable smart device application, designed specifically for communication between public safety agencies and citizens.

A quick way for people to say something when they see something

Provides an immediate warning capability for authorities to reach citizens in an emergency

One click and an individual can call for help when faced with danger

For Communities, School Campuses and Institutions
For all Public Safety Agencies: Police, EMS, Fire, Regional or Local

With the push of a button on their smart phone or tablet, InfoAlert! gives any citizen the ability to place a call for help or alert authorities to a threat

Citizens can receive emergency broadcasts to warn and instruct them during emergencies and events

01 Bi-directional alerts: Authorities and citizens can transmit messages and images to each other

02 Photos of suspicious persons or vehicles can be transmitted between the police and the public

03 Alerts can be silent for situations such as a robbery or school shooting, keeping the perpetrator unaware that a call to police has been placed

04 GPS technology sends responders to the scene, without the sender saying a word

05 Pre-defined lists can be composed to target messages to specific audiences

06 Pre-defined messages can be stored for easy alert dissemination during emergencies

07 For iOS and Android devices

When used with the InfoShare™ CAD, citizen calls go directly to the Emergency Call Center and are displayed on the dispatcher's console
